

Malware & Spybot S&D

Welcome, this time I want to talk to you about some of the other things that can go wrong with your computer, i'm talking about threats from the internet, mainly Spyware and Viruses. Why did I put Spyware in front of Viruses i hear you say, aren't Viruses the worse thing that can happen to me? Sadly the answer is no, Viruses are bad don't get me wrong, you don't want one, but at the end of the day virus scanners have the situation pretty well in hand. If you keep it up to date, scan regularly and have good browsing habits you wont have a problem. Spyware on the other hand is more dangerous because its trying to get lists of passwords from your computer or maybe bank log on details, so you can see the result could be disastrous. You must have, and use, a good spyware scanner, there are some great free ones and the best is Spybot Search and Destroy.

Until next time Happy & Spywarefree Computing!
